Prevalence of Serious Emotional Disorder (SED) & Serious Mental Illness (SMI), (2007)

California State Department of Mental Health calculates prevalence of serious emotional disorder and serious mental illness for all the Counties in the State. These estimates are calculated by applying prediction weights and developed from nationally prominent survey studies to California County population demographics. The State recommends the rates should be understood as reasonable estimates of serious mental illness prevalence rates, rather than counts of actual individuals.

Prevalence by Ethnicity

Prevalence by Gender

Prevalence Rate by Ethnicity: Whites = 6.32%, African American = 7.18%, Latino = 7.66%, Native American = 6.59%, Asian/Pacific Islander = 7.00%.
Prevalence Rate by Gender: Males = 6.38%, Females = 7.76%.

Prevalence rates are also available at [http://dmh.ca.gov/Statistics and Data](http://dmh.ca.gov/Statistics_and_Data)

Poverty (2007)

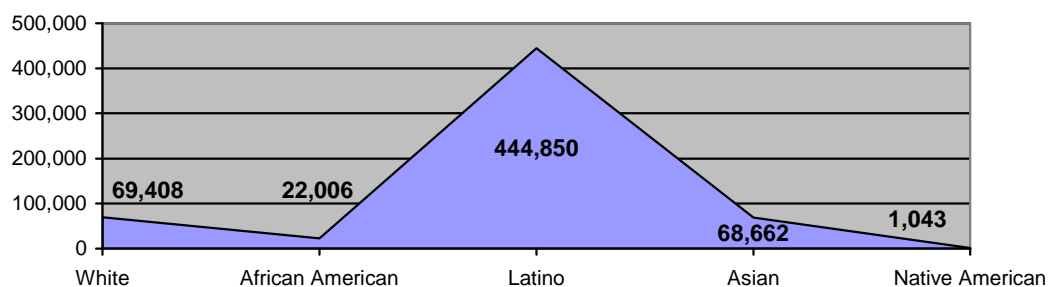

Poverty thresholds are established by the United States Census Bureau. The measurement uses a set of money income thresholds that vary by family size and composition. If a family's total income is less than the family's threshold, then that family and every individual in it is considered in poverty. The official poverty thresholds do not vary geographically and are updated for inflation using Consumer Price Index (CPI-U).

The official poverty definition uses money income before taxes and does not include capital gains or non-cash benefits (such as public housing, Medicaid, and food stamps). Money income includes earnings, unemployment compensation, social security, public assistance payments, pension or retirement income, interest, dividends, rents etc. Poverty thresholds vary by size of the family and ages of family members.

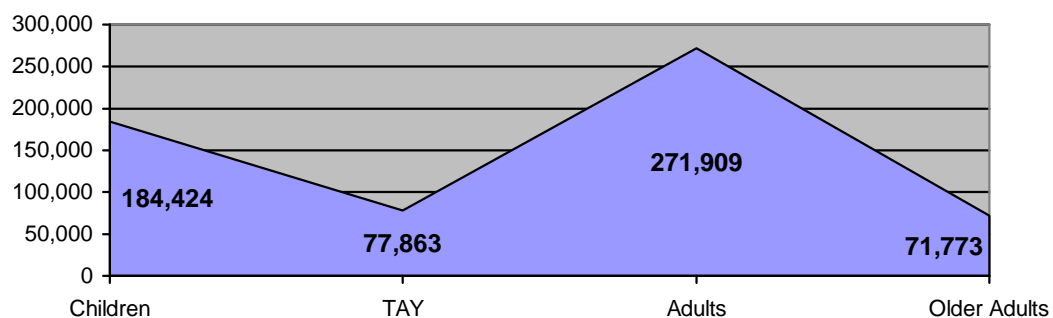

In 2007 the average 100% poverty threshold for a family composed of only two adults was \$13,540, for a family of two children and one adult the threshold was \$16,705 and for a family of two adults and two children it was \$21,027. 200% poverty thresholds are estimated as twice the amount of 100% poverty threshold. Therefore, 200% poverty threshold for a family of four with two children and adults in 2007 was $\$21,027 \times 2 = \$42,054$.

In the year 2007, nearly 605,969 individuals were estimated to be living at or below 200% poverty in Service Area 4.

Prevalence of Serious Emotional Disorder and Serious Mental Illness among Population Living at or Below 200% Poverty Level (2007)

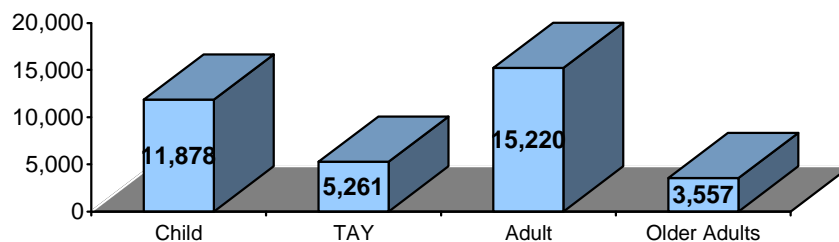

Prevalence estimates of SED and SMI among poverty population is based on population estimates of people living below poverty. The State Department of Mental Health calculates the prevalence of mental illness among population living below 200% poverty. This estimate is approximately 7.51% for all people living below 200% poverty..

Given the disparities in geographic distribution of population by ethnicity in the County, an average prevalence rate by ethnicity and poverty was applied to calculate estimated population living with mental illness and below poverty. This estimate was 6.91% for Whites, 7.34% for African Americans, 7.58% for Latinos, 7.25% for Asian/Pacific Islanders and 7.05% for Native Americans.
